

Index of posters

- Maricela Arroyo P-1
Vanadium pentoxide on zeolite Y destruction
- Marina Balakina P-2
Quantum chemical modeling of the effect of dielectric environment on the nonlinear optical response of conjugated organic molecules
- Wojciech Bartkowiak P-3
Hydrogen bond effects on the electronic absorption spectrum and evaluation of nonlinear properties of an aminobenzodifuranone exhibiting the largest positive solvatochromism
- Cesar C. Diaz P-4
Theoretical study of the alkaline-earth anionic clusters: Ben- and Mgn-
- Edyta Dyguda P-5
Ab initio prediction of binding affinity: determinants of phenylalanine ammonia-lyase inhibition
- Artur Gieldoń P-6
Residues responsible for recognition of antagonists by the vasopressin receptor. Molecular dynamics study.
- Andrzej Gorączko P-7
Prediction of the most abundant peak location in isotopomeric clusters of organic compounds
- Jerzy Hładyszowski P-8
Aggregation of dihexanoylphosphatidylcholine
- Jerzy T. Jodkowski P-9
Theoretical Study on Kinetics of the Reaction of CF₃ and NO₂
- Jakub Kamiński P-10
From van der Waals interactions to a chemical bond. An ab-initio study of the nature of interactions between the methyl cation and rare gas atoms.
- Karina Kubiak P-11
The role of posttranslational oxidation of cysteine in nitrile hydratases. Quantum-chemical study of changes in the electronic structure of active site ligands.
- Vitalina Kukueva P-12
Quantum-chemical research of elemental processes during flame inhibition
- Katarzyna Kulińska P-13
Conformational switching in RNA hairpins

Mirosław Kwiatkowski <i>Numerical study of new mathematical models for adsorption on heterogeneous surface of carbonaceous materials</i>	P-14
Karol Langner <i>Analysis of the intermolecular interactions of intercalation: the propidium chromophore between GC/CG DNA base pairs.</i>	P-15
Aleksandra Lewanowicz <i>Spectroscopic properties and computer modelling of the micro-environmentally induced H-bond transformation of anil-type molecule</i>	P-16
Jan Lundell <i>Computational characterization of the HXeBr-X (X=Xe,HBr,HXeBr) complexes</i>	P-17
Miroslav Medved' <i>Electronic NLO properties of cyanoborane monomers</i>	P-18
Przemysław Miszta <i>FRET donor-acceptor radial distribution functions in human glucokinase: molecular dynamics modelling of the enzyme related to diabetes.</i>	P-19
Jiří Mrázek <i>Is it possible to estimate pKa values from computations on small molecular clusters?</i>	P-20
Wawrzyniec Niewodniczański <i>Nonlinear optical properties of betaine dyes.</i>	P-21
Piotr Ordon <i>Maximum Hardness Principle for Transition States of Chemical Reaction</i>	P-22
Ourida Ouamerali <i>Theoretical study of diatomic molecules XY (X= N, P, As and Y= Te, Se) and its cation XY⁺ and anion XY⁻ : Methods and basis effect.</i>	P-23
Matej Pavelka <i>Quantum Chemical Study of Redox Properties of Various Cu(I)/Cu(II) Complexes.</i>	P-24
Tadeusz Pietryga <i>Modeling the mechanism of oxidative N-demethylation for the aromatic amines</i>	P-25
Teri Robinson <i>Modification of Empirical Force Field With Inclusion of Nonrigidity in DNA Bases.</i>	P-26
Piotr Romiszowski <i>Properties of Star-Branched and Linear Chains in Confined Space. A Monte Carlo Study.</i>	P-27

Dorota Rutkowska-Żbik <i>Catalytic Properties of Manganese Porphyrin Immobilized on HMS Type Materials. Ab initio DFT Studies</i>	P-28
Joanna Sarzyńska <i>Conformational Sampling of RNA by Replica Exchange Molecular Dynamics</i>	P-29
Josef Seda <i>Photosynthetic Pigments and PS II Reaction Center Theoretical Studies</i>	P-30
Andrzej Sikorski <i>Computer simulation of polymer translocation through a hole.</i>	P-31
Tomekia Simeon <i>A computational investigation of the structural and electronic properties of fullerene made with substituted atoms</i>	P-32
Adalgisa Sinicropi <i>A CASPT2//CASSCF/CHARMM Strategy for Biological Chromophores: The Green Fluorescent Protein</i>	P-33
Adam Sokołowski <i>Towards a Tunable Molecular Memory which Fits Into a $(10 \text{ \AA})^3$ Cube</i>	P-34
Bartłomiej Szyja <i>Influence of Pt and Sn on the adsorption of n-heptane in Pt-Sn/Al₂O₃ catalyst.</i>	P-35
Akitomo Tachibana <i>A New Visualization Scheme of Chemical Energy Density and Bonds in Molecules</i>	P-36
Piotr Kornel Wawrzyniak <i>Formic Acid Complex with Noble Gases as Studied by Ab Initio Quantum Theory</i>	P-37
Paweł Wielgus <i>Theoretical study of the nature of the excess electron and interaction energies in dipole- bound $(\text{H}_2\text{O})_2^-$ and $(\text{H}_2\text{O}_2)^- Ar_{n=1,2,3,4}$</i>	P-38
Mary La'Frances Williams <i>Molecular Properties of Protonated Oxygen Cluster</i>	P-39
Jolanta Żurek <i>QM/MM studies of amino acid activation reaction</i>	P-40
